

Real Candles. iPhone application

Customer

Corporation-developer of software.

Aim

The aim is developing application, which imitates burning candle. The application must realize such capabilities, as selection candle from the list, candles discoloration, firing or blowing out candle. Candles flame must react on mobiles rotation.

Solution

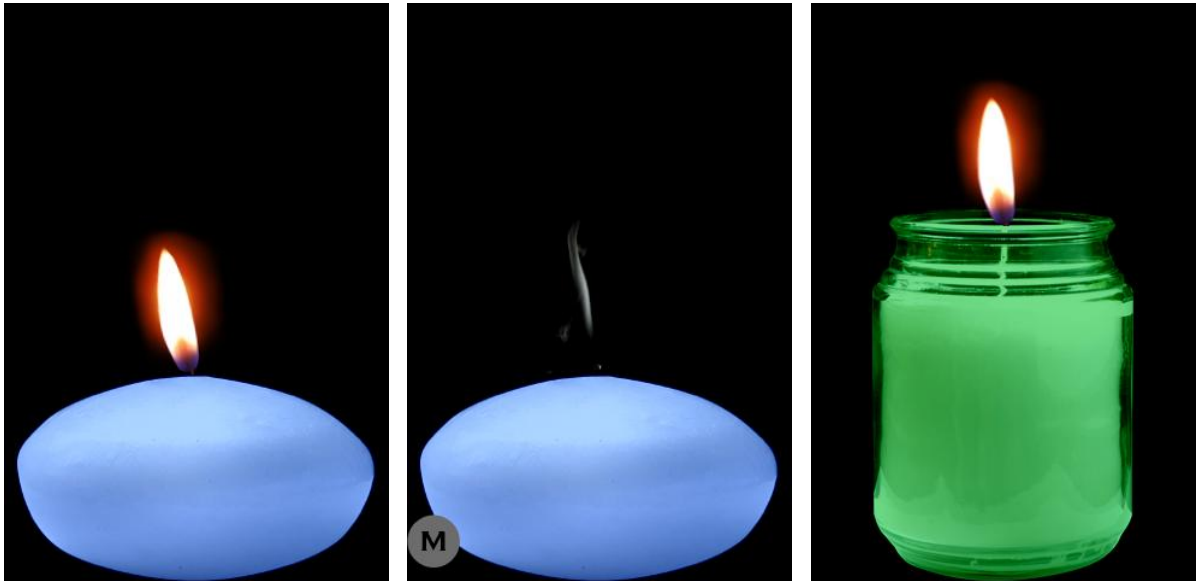

First of all there were used standard elements of creating graphic interface in developing of application. If it was not enough, we develop our own elements with necessary capabilities. There was developed ColorBalance class for realization functionality of changing images color. This class works with images in color circuit RGB.

Basic Functions and Effects

- To fire/blow out candles.
- Loading current or new candle.
- Selection candle for loading.
- Candles discoloration.
- Candles flame reaction on mobiles rotation.
- Viewing information about using application.
