

## Personal management system

### Aim

The main task is to develop Personnel Management System to manage staff. With this program customer can control and process personal information about cooperators and register and keep all ingoing and outgoing documentation.

The following product contains personnel management system to register information about cooperators, including their career paths, vacations and leaves, and staff rotations; cooperator's database; document management system to store, register and manage documents.

### Solution

Our task included full development of application and its design. The platform was successfully integrated with present systems. The main problem in the beginning of development was lack of clear-cut demands and just general idea of system's functionality and design. Because of this we prepared full case of technical documents, was developed and approved system prototype and our team successfully developed this program.

### Basic functions

- Registration information about cooperators.
- Document management system to store, register and manage documents.
- Creation of cooperator's database.

### Technologies

IBM Lotus Notes/Domino, IBM Lotus Script, JavaScript, HTTP, Web services, Microsoft SQL Microsoft C#, Net Framework 3.5, AJAX, DHTTP, VisualBasic for Microsoft Office.

### Product Title

Persman

### Project Capacity

25 man-months
