

## iAura

### Customer

Tappix

### Aim

Developing of application, this works with images. Customer can choose one of two variants – take a photo or use the picture from Camera roll. Than one of layers is overlaped on selected background (photo) and random text is selected. Text tells us about aura of man on the.

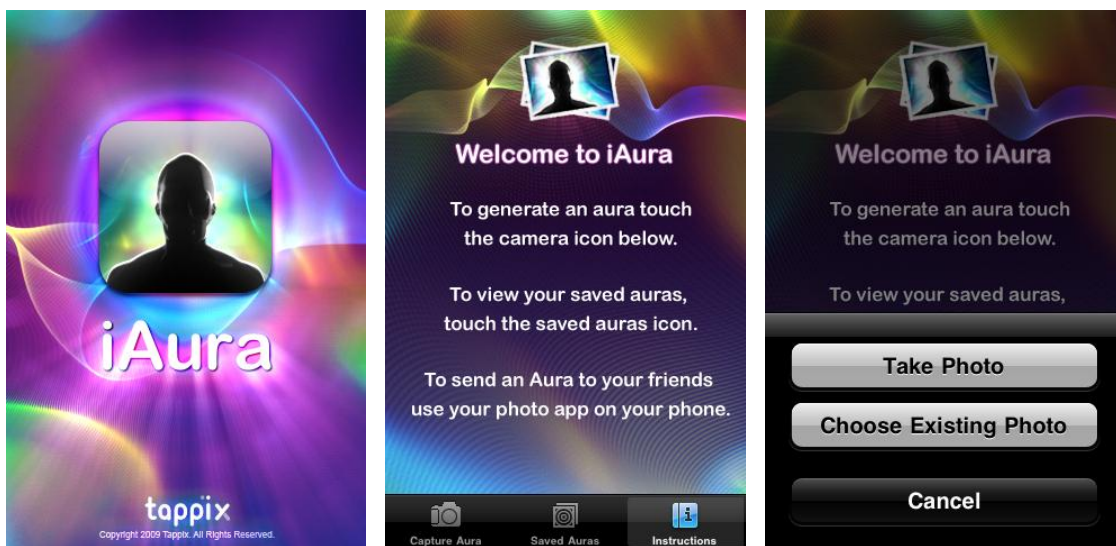

### Solution

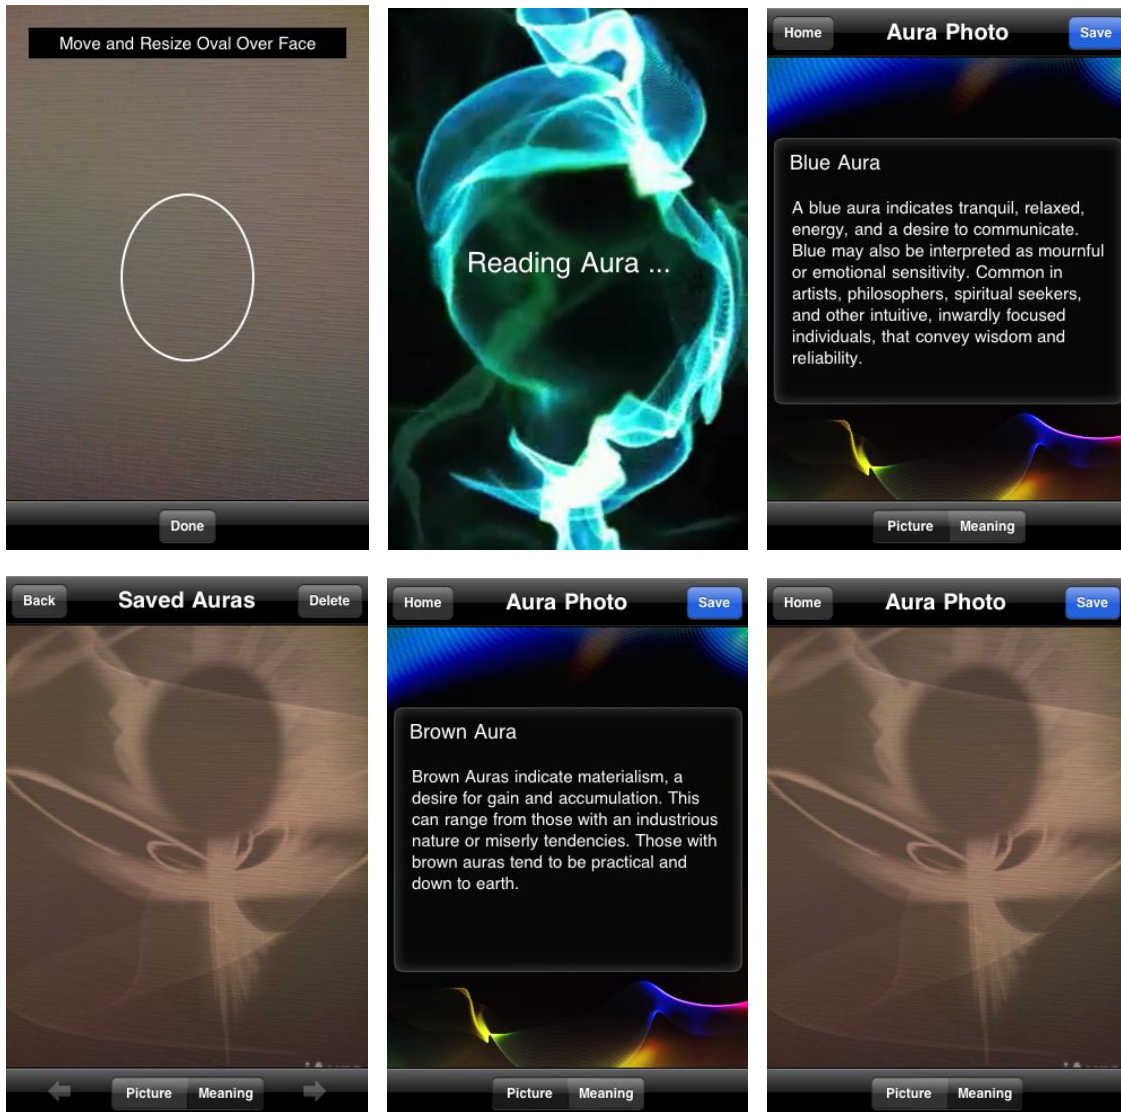

For realisation of basic function there was developed iPhone application, which creates image on the base of chosen or taken picture by aliasing layer on selected background (photo). Layer and text are selected random from several layers and texts saved in application.

### Basic Functions and Effects

- Choosing the image from photo roll.
- Choosing a clipart from the library (its own component).
- Saving the result in photo roll and in favourites.
- Adding an element onto a scene.
- Random selection of text.
